Part IV. Writing an equation for a circle in standard form and getting a graph sometimes involves some algebra. For example, the equation is an equation of a circle. To see this we will need to complete the square for both x and y . This simplifies to which is the standard form of a circle with center $(2, -3)$ and radius $= 6$. To graph a circle in standard form, you need to first solve for y .

We have methods for solving equations such as .But what happens if we have an equation where the variable is in the exponent. If , we cannot divide by 3 or subtract 3 from both sides of the equation to solve for x . Or if the equation is we still have a problem isolating the variable. We need a process for solving exponential equations.
