Avian brains and a new understanding of vertebrate brain evolution -- A consortium of neuroscientists (Jarvis et al. 2005) has proposed a renaming of the structures of the bird brain to correctly portray birds as more comparable to mammals in their cognitive ability. The scientists assert that the century-old traditional nomenclature is outdated and does not reflect new studies that reveal the ...

Testosterone increases availability of carotenoids-- Androgens and carotenoids play a fundamental role in the expression of secondary sex traits in animals that communicate information on individual quality. In birds, androgens regulate song, aggression, and a variety of sexual ornaments and displays, whereas carotenoids are responsible for the red, yellow, and orange colors of the integument.

The WAIR hypothesis, a version of the "cursorial model" of the evolution of avian flight, in which birds' wings originated from forelimb modifications that provided downforce, enabling the proto-birds to run up extremely steep slopes such as the trunks of trees, was prompted by observation of young chukar chicks, and proposes that wings developed their aerodynamic functions as a result of the ...

Avian influenza—known informally as avian flu or bird flu is a variety of influenza caused by viruses adapted to birds. The type with the greatest risk is highly pathogenic avian influenza (HPAI). Bird flu is similar to swine flu, dog flu, horse flu and human flu as an illness caused by strains of influenza viruses that have adapted to a specific host. Out of the three types of influenza ...

Guest Editor's Introduction. Until recently, the design of green roofs was based almost entirely on engineering considerations. Much has been written about how extensive green roofs—those that are grown on a shallow substrate and require little irrigation or other maintenance—affect building performance, especially energy consumption and storm-water retention.

Avian pathogenic *Escherichia coli* (APEC) can cause severe respiratory diseases in poultry. The initial interaction between APEC and chicken macrophages has not been characterized well and it is unclear how effective chicken macrophages are in neutralizing APEC.

Several studies in poultry have investigated that high temperature influences the health, physiology and efficiency of chickens (Deeb et al., 2002, Ghazi et al., 2012, Attia et al., 2017b). Sohail et al. (2012) reported that broilers at 42 days of age exposed to chronic heat exposure had a 16.4% reduced feed intake, 32.6% body weight and a 25.6% higher feed consumption ratio.

HIV-1 Env is dynamic and undergoes large conformational changes that drive fusion of virus and host cell membranes. Three Env proteins in a trimer contact each other at their apical tips to form a closed conformation that presents epitopes recognized by broadly neutralizing antibodies.
