Hair loss during menopause is a common symptom for many women. For others, dry and damaged-looking hair is equally troubling and problematic. This article considers possible causes and solutions.

Hair Loss During Menopause - Possible causes and solutions.

Hair transplantation is a surgical technique that moves individual hair follicles from a part of the body called the donor site to bald or balding part of the body known as the recipient site. It is primarily used to treat male pattern baldness. In this condition, grafts containing hair follicles that are genetically resistant to balding are transplanted to bald scalp.

Management of hair loss - Wikipedia

Each strand of hair sits in a tiny hole in the skin called a follicle. In general, baldness occurs when the hair follicle shrinks over time, resulting in shorter and finer hair. Eventually, the follicle does not grow new hair. The follicles remain alive, which suggests that it is still possible to ...
