Understanding Bitcoin Cryptography Engineering And

Bitcoin (₿) is a cryptocurrency, a form of electronic cash. It is a decentralized digital currency without a central bank or single administrator that can be sent from user to user on the peer-to-peer bitcoin network without the need for intermediaries. Transactions are verified by network nodes through cryptography and recorded in a public distributed ledger called a blockchain.

When calculating a simple moving average, `numpy.convolve` appears to do the job. Question: How is the calculation done when you use `np.convolve(values, weights, 'valid')`? When the docs mentioned convolution product is only given for points where the signals overlap completely, what are the 2 signals referring to?. If any explanations can include examples and illustrations, it will be extremely ...

As an unordered collection type, `set([8, 1, 6])` is equivalent to `set([1, 6, 8])`. While it might be nicer to display the set contents in sorted order, that would make the `repr()` call more expensive. Internally, the set type is implemented using a hash table: a hash function is used to separate items into a number of buckets to reduce the number of equality operations needed to check if an item ...

A blockchain, originally block chain, is a growing list of records, called blocks, which are linked using cryptography. Each block contains a cryptographic hash of the previous block, a timestamp, and transaction data (generally represented as a Merkle tree). By design, a blockchain is resistant to modification of the data. It is "an open, distributed ledger that can record transactions ...

Joel is mistaken when he says that `as of` means "up to and including a point of time," although it is often used to mean so. `As of` designates the point in time from which something occurs. So `as of some point` would mean from the date specified onward. However, his answering of the best way to say each phrase is spot on. One may use either `until` or `up to` to mean the time before which something ...
