In statistics, the bias (or bias function) of an estimator is the difference between this estimator's expected value and the true value of the parameter being estimated. An estimator or decision rule with zero bias is called unbiased. Otherwise the estimator is said to be biased. In statistics, "bias" is an objective property of an estimator, and while not a desired property, it is not ...

bias definition: 1. the action of supporting or opposing a particular person or thing in an unfair way, because of allowing personal opinions to influence your judgment: 2. the fact of preferring a particular subject or thing: 3. a direction at an angle across the threads of woven material: . Learn more.

### **BIAS | meaning in the Cambridge English Dictionary**

A number of biases occur so often, in so many contexts, that cognitive scientists have given them names. (See "Common Biases," below.) Some, like the confirmation bias (which leads people to discount information that disagrees with their assumptions), have been critical factors in financial crises, including the Great Recession of 2007.
